💼 PROFESSIONAL EXPERIENCE

Inbox Infotech

Frontend Developer

10/2024 – present

My role is Implementing Designs, Building User Interfaces, JavaScript Development, Performance Optimization, Version Control, Collaboration and Communication, Continuous Improvement, User Experience Focus.

Numerator Pvt Ltd

Data Associate

05/2019 – 09/2024

My role was Identifying, collecting and processing of ads appearing on television in US/Canada using Pattern Recongnition Software and ensuring ads are received and processed in the most timely, accurate and cost effective way possible to meet deadline.

📁 PROJECTS

E-classmate

I developed a static, responsive website using HTML5 and CSS3 for structure and layout. Bootstrap 5 ensured responsiveness, JavaScript and jQuery added interactivity and validation, and Swiper.js provided smooth sliders for a user-friendly experience.

Numina

I create modern, responsive websites using HTML5, CSS3, Bootstrap, and JavaScript, enhanced with AOS animations for smooth scrolling and an engaging, user-friendly experience across all devices.

Akshar Surfaces

I build static websites using HTML5 and CSS3, ensuring responsive layouts with Bootstrap 5's grid system. To enhance user experience, I incorporate smooth animations using the GSAP library, creating visually engaging and modern web designs.

Tuno

I developed this project using the MERN stack. I designed and implemented backend APIs and integrated them with the frontend. Additionally, I worked on the admin panel, where I implemented and consumed CRUD operation APIs to manage application data efficiently.

Cosmind

I built this website using React.js, implementing reusable components and efficient state management to deliver a smooth user experience.
